

The Chemist Entrepreneur: From the Lab into the Business World

Guillermo Morales, Vice President of Business Development, CGeneTech, Inc., Indianapolis, IN.

Getting a scientific degree is the cornerstone for a professional career in science, but this alone is not enough to find a job and/or have a fulfilling career path. It takes more than knowing science to grow a career. Academia and industry have their own challenges, but they are not mutually exclusive. Leaving the life in the lab to pursue other opportunities, particularly in start-up companies, exposes you to a new world not taught in school. This seminar will cover topics, strategies, and tips (many learned the hard way) to help you prepare for life after school and to be ready to manage and nurture the most valuable asset you will ever have: you.
