

Elanco Animal Health – Clinton Laboratories

Patrick Cheek and Kim Gleason

Elanco provides a comprehensive array of products and knowledge services to improve animal health and food animal production in more than 70 countries around the world. We value innovation, both in scientific research and daily operations. As a company, Elanco is committed to raising awareness about global food security, and supporting the human-animal bond. Clinton Laboratories is large scale manufacturing site that employs microbiologists, analytical and organic chemists, biologists, biochemists, and engineers. For the 2019 - 2020 recruiting season, Clinton is looking to discover top talent for both the internship program and full time scientist positions. Through investigations, cross-functional collaboration, and process monitoring, Elanco's manufacturing scientists and chemists use their process knowledge and technical training to improve the manufacturing process and/or ensure effectiveness and safety of our products.
