

Career Opportunities for Professional Chemists Available in Terre Haute.

Brent Schludecker, President, Midwest Compliance Laboratories

Midwest Compliance Laboratories is a contract, quality control pharmaceutical laboratory that has grown significantly over the past 12 years into one of the premier laboratories in the country providing on-going quality control testing support to high-volume pharmaceutical distributors and re-packagers. MC Labs tests over one hundred unique drug products in a variety of packaging types (blisters, bottles, unit doses) and dosage forms (capsules, tablets, ointments). HPLC, GC, UV-Vis, LC-MS, ICP-OES, and AA are just some of the instrumentation types used in our lab and chemists working for MC Labs will develop a strong expertise in these techniques over time. MC Labs has several opportunities available and would enjoy sharing more about these opportunities and further details about our company at the October 20th seminar.
