ISU launches COVID-19 vaccination dashboard

Starting at noon today, the ISU COVID-19 dashboard will include summary information on the number of students and employees who have provided verification of receipt of the COVID-19 vaccine. The dashboard is at: <https://www.indstate.edu/covid/dashboard> In addition to having information about COVID-19 isolation and quarantine numbers, the dashboard will include the number of students with verified vaccination, number of employees with verified vaccination, and the percentage of the on-campus (students and employees) population with an uploaded vaccination record. The vaccine information will be updated every Monday.

The COVID-19 isolation and quarantine numbers will continue to be updated daily, Monday through Friday.

"The number one priority of our current COVID-19 mitigation efforts is to increase the number of members of our on-campus community that are vaccinated," said Vice President for University Engagement Nancy Rogers. "Moving the needle on this important initiative requires the help of the entire campus. Providing timely and accurate information about the status of vaccinations on campus can only help us reach our goal of nearly universal vaccination."
