**Dates:** Thursdays, May 23 & 30

**Time:** 1:00–2:30 p.m.

**Place:** ISU Cunningham Memorial Library  
Room 028

While many pine for the “good old days” before college sports became big business, the influence of sponsors and advertisers is not new to intercollegiate athletics. In fact, the very first American intercollegiate athletic competition, a boat race between Harvard and Yale in 1852, was sponsored by the Boston, Montreal, and Concord Railroad Company.

Since that time, intercollegiate sports in the United States has grown from a primarily student-led competition for bragging rights to a vast commercial operation. As of 2021, the U.S. Dept. of Education estimated the size of the US college sports industry to be \$14.4 billion. The financial impact of college athletics and the accompanying cultural attachment is uniquely American.

In this two-session course, Dr. Jim Evans, Professor of Sport Management, will discuss the historical evolution of the business of college sports with particular emphasis on recent legal and governance changes that give college athletes greater rights than they have ever had. Session One will cover the evolution of college athletics as a business, and Session Two will highlight recent changes to college sports (NIL/ Transfer Portal) that will undoubtedly impact how the game is played, coached, and enjoyed by fans.

## Game Changing Foods

With **Dr. Anne Foster**

**Dates:** Fridays, July 12 & 19

**Time:** 10:00–11:30 a.m.

**Place:** ISU Cunningham Memorial Library  
Room 028

**Cost:** \$10

ISU Associate Professor of History, Dr. Anne Foster, presents the first installment of a three-part series called *The History of Food*. This first class, *Game Changing Foods*, will examine two foods, sugar and corn, that changed the way people eat. Prior to 1700, sugar was so rare and expensive people took it as medicine. In 2024, sugar is so cheap and common that Americans on

average consume 17 teaspoons per day, more than twice what is recommended. Sugar fueled slavery and the industrial revolution, and it has transformed nearly every food people eat, from marinated chicken to bread to spaghetti sauce. In Indiana, people eat a lot of corn: corn on the cob, cornbread, corn pudding, and of course, corn syrup. Corn is a New World food, not known in Europe, Asia or Africa before 1500. Corn consumption quickly spread around the world, but for animals, not humans. Corn made it possible to raise animals more quickly and cheaply for meat and milk. This course will explore how everyone in the world has come to eat a lot of corn, although outside the United States, they rarely eat it directly.

This grand building, built in the early-1930s as part of the WPA, is a classic example of the art deco style of design that was typical of many federal buildings in the 1930s. The building was placed on the National Registry of Historic Places in 1984. After security changes for all federal buildings, a new federal courthouse was built and Congress transferred the building to the University in 2010. ISU invested \$30 million to renovate the building and retrofit it for educational purposes, with the first classes held in 2012. Join ISU Professor Emeritus Dr. Bruce McLaren and Lisa Gomperts, FAIA, from Schmidt Architects in the stunning Magna Carta Room as they provide a history of the building and its renovation. Like many figurative painters, Lewis understands that it is in the abstractions that the structure and movements in a painting are conceived, and he may work for years on a painting or drawing attempting to grasp the essential relationships that drive movement and create a sense of spatial depth. The result is a painting that brings attention to the materiality of the paint and other materials while simultaneously communicating the complexity of his subject.
