The Mura indigenous people from Brazil swore to drop the last drop of their blood to protect the Amazon rainforest from President Jair Bolsonaro and his environmental policies that have emboldened loggers, farmers, cattle ranchers, and miners to strip and burn protected and unprotected indigenous land in the Amazon. The destruction of the rainforest will release enormous quantities of greenhouse gasses with carbon dioxide emissions turning the rainforest into a savanna. We are only 5% away from reaching that point. The ancestral Mura indigenous who fought and contained the Portuguese church and the conquistadores are now defending the Lungs of the Earth, the Amazon, their traditional territory from deforestation.
